

Clicker Training Planning Activity

Clicker training is a positive reinforcement method that teaches your pet to associate a click sound to getting a reward! This is done by rewarding small steps that lead to a new behaviour for your pet! Encouraging and rewarding are the best ways to teach pets new skills!

Directions:

- 1 Use the skill plan on the next page to draw or write out each of the small steps to teach your pet a new skill.
- 2 Reward them lots for each small step. If you move too fast, your pet will get confused and not understand what you want.
- 3 Go at the pace of your pet, everyone will learn at a different speed (just like us!). There is no set number of how many times you should reward a step,

Below is a sample plan on how to teach your cat to touch their nose to your hand

My Goal: Nose Touch

Start: Look in the direction of my hand, reward at least 10 times

Move their head towards my hand, reward at least 10 times

End Result:
Have their nose touch my hand, reward every time!
