

Fantastic Frogs

Got My Eye on You

When a frog swallows its prey, it blinks, which pushes its eyeballs down on top of the mouth to help push the food down its throat.

Leave No Trace

A frog completely sheds its skin about once a week. After it pulls off the old, dead skin, the frog usually eats it.

Croak-a-doodle-doo

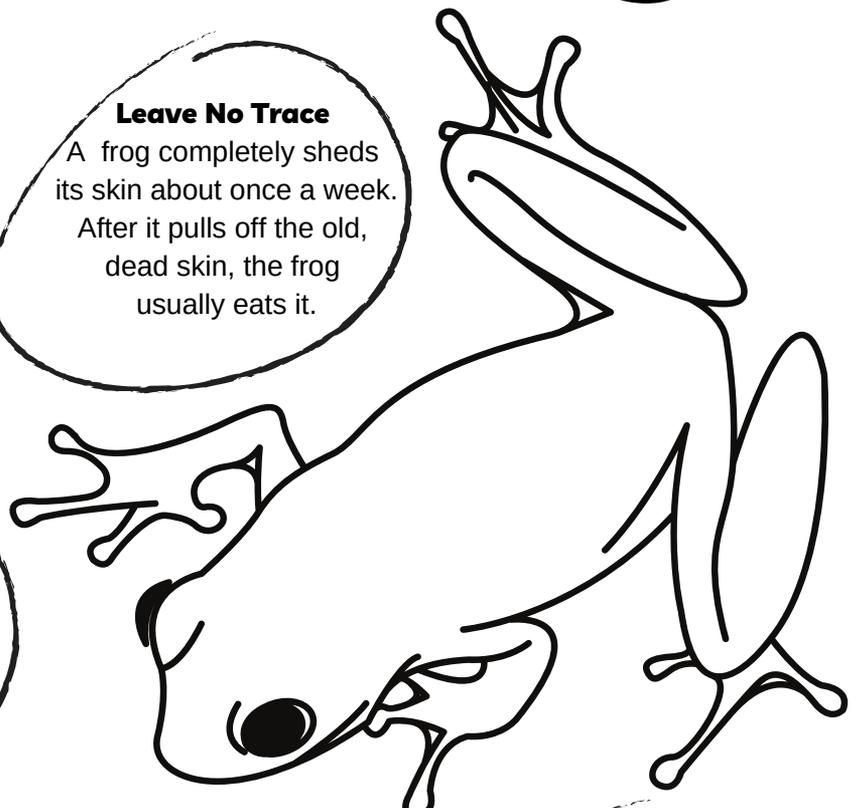

The bullfrog is an invasive species in BC that comes from Eastern Canada. They can grow to the size of a chicken!

Catching Cold

There are 12 species of frog in BC, including the Wood Frog, who can survive being nearly frozen solid. In winter they stop breathing and their heart stops beating but they "thaw out" when the weather warms up.

The Whole Troop

A group of frogs is called an Army of frogs.
